If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0915 Galata Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0915 Galata Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0915 Galata Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0364 Gallatin Gateway Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0364 Gallatin Gateway Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0364 Gallatin Gateway Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	24	26	1 (100%)	0.8713	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0364 Gallatin Gateway Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0364 Gallatin Gateway Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	18	10	0.56 (56%)	0.27789	0.80238	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	18	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	18	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0364 Gallatin Gateway Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0614 Gardiner Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0614 Gardiner Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0614 Gardiner Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	20	20	1 (100%)	0.83891	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	20	10	0.5 (50%)	0.23657	0.76343	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0614 Gardiner Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0614 Gardiner Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	12	8	0.67 (67%)	0.3387	0.88651	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	12	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	12	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0614 Gardiner Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0614 Gardiner Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1191 Gardiner H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1191 Gardiner H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

1191 Gardiner H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1191 Gardiner H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1191 Gardiner H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1191 Gardiner H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1191 Gardiner H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0378 Garfield County H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0378 Garfield County H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0378 Garfield County H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0378 Garfield County H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0378 Garfield County H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0718 Garrison Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0718 Garrison Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0718 Garrison Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0718 Garrison Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0718 Garrison Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0718 Garrison Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0153 Geraldine Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0153 Geraldine Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0153 Geraldine Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0153 Geraldine Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0153 Geraldine Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0153 Geraldine Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0153 Geraldine Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0154 Geraldine H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0154 Geraldine H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0154 Geraldine H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0154 Geraldine H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0472 Geyser Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0472 Geyser Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0472 Geyser Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	10	0.71 (71%)	0.40951	0.90015	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0472 Geyser Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0472 Geyser Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	10	9	0.9 (90%)	0.57728	0.98345	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	10	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	10	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0472 Geyser Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0472 Geyser Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0473 Geyser H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0473 Geyser H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0473 Geyser H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0473 Geyser H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0473 Geyser H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0473 Geyser H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0473 Geyser H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1217 Gildford Colony Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1217 Gildford Colony Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1217 Gildford Colony Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1217 Gildford Colony Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0926 Glasgow K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	14	10	0.71 (71%)	0.4095	0.90015	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0926 Glasgow K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	35	4	0.11 (11%)	0.01113	0.59527	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0926 Glasgow K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	100	119	1 (100%)	0.96874	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	100	27	0.27 (27%)	0.13935	0.45793	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0926 Glasgow K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0926 Glasgow K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	102	41	0.4 (40%)	0.2666	0.55411	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	102	12	0.12 (12%)	0.02656	0.3941	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	102	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0926 Glasgow K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	19	13	0.68 (68%)	0.41625	0.86815	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0206 Glendive Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0206 Glendive Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	168	154	0.92 (92%)	0.86224	0.95082	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	168	55	0.33 (33%)	0.21821	0.45908	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0206 Glendive Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0206 Glendive Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	133	86	0.65 (65%)	0.5413	0.73939	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	133	9	0.07 (7%)	0.00828	0.38564	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	133	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0206 Glendive Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	26	15	0.58 (58%)	0.3376	0.78488	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0206 Glendive Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0721 Gold Creek Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0721 Gold Creek Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0721 Gold Creek Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0721 Gold Creek Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0721 Gold Creek Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0721 Gold Creek Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0721 Gold Creek Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0896 Golden Ridge Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0896 Golden Ridge Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0896 Golden Ridge Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0896 Golden Ridge Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0896 Golden Ridge Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0896 Golden Ridge Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0003 Grant Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0003 Grant Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0003 Grant Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	12	1 (100%)	0.75755	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0003 Grant Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0003 Grant Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0003 Grant Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0268 Grass Range Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0268 Grass Range Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0268 Grass Range Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0268 Grass Range Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0268 Grass Range Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0269 Grass Range H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0269 Grass Range H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0269 Grass Range H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0269 Grass Range H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0269 Grass Range H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0269 Grass Range H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0098 Great Falls Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0098 Great Falls Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0098 Great Falls Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	1018	1010	0.99 (99%)	0.98453	0.99602	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	1018	399	0.39 (39%)	0.34529	0.44066	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0098 Great Falls Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0098 Great Falls Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	682	422	0.62 (62%)	0.57155	0.66384	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	682	107	0.16 (16%)	0.10003	0.23752	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	682	4	0.01 (1%)	-0.00001	0.49579	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0098 Great Falls Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	147	59	0.4 (40%)	0.28604	0.52873	0.548 (54.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0099 Great Falls H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	91	49	0.54 (54%)	0.40121	0.67011	0.699 (69.9%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0099 Great Falls H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	374	48	0.13 (13%)	0.06074	0.25099	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0099 Great Falls H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	166	164	0.99 (99%)	0.95686	0.99672	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	166	75	0.45 (45%)	0.34427	0.56404	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0099 Great Falls H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0099 Great Falls H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	374	85	0.23 (23%)	0.15112	0.32699	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	374	173	0.46 (46%)	0.38988	0.53687	0.12 (12%)	Not Met
Indicator 5C	Education Environment Rate -- Sep Schls	374	1	0 (0%)	-0.00008	0.79457	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0099 Great Falls H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0099 Great Falls H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0900 Greenfield Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0900 Greenfield Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0900 Greenfield Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0900 Greenfield Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0900 Greenfield Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0872 Greycliff Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0872 Greycliff Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0872 Greycliff Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0872 Greycliff Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

0872 Greycliff Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0418 Hall Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	11	9	0.82 (82%)	0.49158	0.95446	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	61	2	0.03 (3%)	0.00047	0.67951	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0735 Hamilton K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	180	195	1 (100%)	0.98069	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	180	43	0.24 (24%)	0.13632	0.38427	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0735 Hamilton K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0735 Hamilton K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	170	81	0.48 (48%)	0.37125	0.58381	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	170	14	0.08 (8%)	0.01617	0.32832	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	170	2	0.01 (1%)	0	0.66559	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0735 Hamilton K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	25	6	0.24 (24%)	0.05596	0.62696	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0735 Hamilton K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0023 Hardin Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0023 Hardin Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	102	178	1 (100%)	0.97888	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	102	45	0.44 (44%)	0.30647	0.58513	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5C	Education Environment Rate -- Sep Schls	103	1	0.01 (1%)	-0.00005	0.79745	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0023 Hardin Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	11	11	1 (100%)	0.74121	1.00002	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0023 Hardin Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1189 Hardin H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	18	16	0.89 (89%)	0.65616	0.97107	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1189 Hardin H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	50	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1189 Hardin H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1189 Hardin H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1189 Hardin H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	50	26	0.52 (52%)	0.33814	0.6967	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	50	2	0.04 (4%)	0.00072	0.6842	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	50	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1189 Hardin H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0030 Harlem Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0030 Harlem Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0030 Harlem Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	42	48	1 (100%)	0.92592	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0030 Harlem Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0030 Harlem Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	40	33	0.82 (82%)	0.66383	0.91841	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	40	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	40	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0030 Harlem Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0030 Harlem Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0031 Harlem H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0031 Harlem H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	14	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0031 Harlem H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0031 Harlem H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0031 Harlem H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	14	14	1 (100%)	0.78473	1.00002	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	14	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	14	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0031 Harlem H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0031 Harlem H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0945 Harlowton Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0945 Harlowton Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0945 Harlowton Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	46	46	1 (100%)	0.92295	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	46	17	0.37 (37%)	0.18497	0.60223	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0945 Harlowton Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0945 Harlowton Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	30	18	0.6 (60%)	0.3762	0.78863	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	30	3	0.1 (10%)	0.00676	0.64236	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	30	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0945 Harlowton Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0945 Harlowton Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0946 Harlowton H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0946 Harlowton H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	19	1	0.05 (5%)	0.00061	0.81451	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0946 Harlowton H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	10	10	1 (100%)	0.72251	1.00003	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0946 Harlowton H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0946 Harlowton H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	19	17	0.89 (89%)	0.67148	0.97251	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	19	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	19	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0946 Harlowton H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0946 Harlowton H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0543 Harrison K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0543 Harrison K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0543 Harrison K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	20	16	0.8 (80%)	0.55659	0.92728	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0543 Harrison K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0543 Harrison K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	20	15	0.75 (75%)	0.49698	0.9011	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	20	1	0.05 (5%)	0.00055	0.81349	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	20	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0543 Harrison K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0543 Harrison K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0427 Havre Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0427 Havre Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0427 Havre Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	266	263	0.99 (99%)	0.9672	0.99618	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	266	93	0.35 (35%)	0.26042	0.45075	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0427 Havre Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	192	10	0.05 (5%)	0.00561	0.3471	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	192	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0427 Havre Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	24	21	0.88 (88%)	0.67463	0.95942	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Linda McCulloch, Superintendent
Montana Office of Public Instruction

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0427 Havre Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0428 Havre H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	17	7	0.41 (41%)	0.14837	0.73766	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0428 Havre H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	82	16	0.2 (20%)	0.07003	0.43823	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0428 Havre H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	36	36	1 (100%)	0.9036	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0428 Havre H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0428 Havre H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	82	30	0.37 (37%)	0.21807	0.54407	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	82	11	0.13 (13%)	0.03124	0.42638	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	82	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0428 Havre H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0078 Hawks Home Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0078 Hawks Home Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0078 Hawks Home Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0078 Hawks Home Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0078 Hawks Home Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1213 Hays-Lodge Pole K-12 Schls

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1213 Hays-Lodge Pole K-12 Schls

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	17	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	24	28	1 (100%)	0.87938	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1213 Hays-Lodge Pole K-12 Schls

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	40	5	0.12 (12%)	0.01572	0.56006	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	40	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1213 Hays-Lodge Pole K-12 Schls

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1213 Hays-Lodge Pole K-12 Schls

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1226 Heart Butte K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1226 Heart Butte K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

1226 Heart Butte K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1226 Heart Butte K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1226 Heart Butte K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	22	12	0.55 (55%)	0.28897	0.77989	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	22	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	22	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1226 Heart Butte K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0487 Helena Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0487 Helena Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0487 Helena Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	890	882	0.99 (99%)	0.98231	0.99545	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	890	303	0.34 (34%)	0.28939	0.39551	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0487 Helena Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0487 Helena Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	584	380	0.65 (65%)	0.60145	0.69689	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	584	41	0.07 (7%)	0.02365	0.19036	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	584	2	0 (0%)	-0.00006	0.65994	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0487 Helena Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	81	34	0.42 (42%)	0.27043	0.58535	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0487 Helena Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0320 Helena Flats Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0320 Helena Flats Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0320 Helena Flats Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	32	26	0.81 (81%)	0.62658	0.91799	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	24	22	0.92 (92%)	0.73149	0.978	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	24	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	24	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0320 Helena Flats Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0320 Helena Flats Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0488 Helena H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	59	43	0.73 (73%)	0.58136	0.83874	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0488 Helena H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	280	26	0.09 (9%)	0.02867	0.26182	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0488 Helena H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	154	140	0.91 (91%)	0.84994	0.9464	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	154	37	0.24 (24%)	0.13139	0.39797	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0488 Helena H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0488 Helena H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	280	210	0.75 (75%)	0.68729	0.80372	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	280	31	0.11 (11%)	0.04093	0.2663	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	280	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0488 Helena H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0586 Hellgate Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0586 Hellgate Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0586 Hellgate Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	146	140	0.96 (96%)	0.91197	0.98133	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	146	50	0.34 (34%)	0.22645	0.48096	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0586 Hellgate Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0586 Hellgate Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	100	62	0.62 (62%)	0.49554	0.73045	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	100	3	0.03 (3%)	0.00061	0.5871	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	100	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0586 Hellgate Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0586 Hellgate Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0717 Helmville Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0717 Helmville Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0717 Helmville Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0717 Helmville Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0717 Helmville Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0717 Helmville Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0717 Helmville Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0145 Highwood Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0145 Highwood Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0145 Highwood Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0145 Highwood Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0146 Highwood H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0146 Highwood H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0146 Highwood H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0146 Highwood H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0146 Highwood H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0146 Highwood H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0932 Hinsdale Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0932 Hinsdale Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0932 Hinsdale Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	16	1 (100%)	0.80643	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0932 Hinsdale Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0932 Hinsdale Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0932 Hinsdale Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0933 Hinsdale H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0933 Hinsdale H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0933 Hinsdale H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0933 Hinsdale H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0933 Hinsdale H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0469 Hobson K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0469 Hobson K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0469 Hobson K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0469 Hobson K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0469 Hobson K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	7	0.54 (54%)	0.22775	0.82192	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	1	0.08 (8%)	0.00139	0.82377	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0469 Hobson K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status

District Name 0814 Hot Springs Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0814 Hot Springs Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0814 Hot Springs Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0814 Hot Springs Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0814 Hot Springs Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0815 Hot Springs H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0815 Hot Springs H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0815 Hot Springs H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0815 Hot Springs H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0983 Huntley Project K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0983 Huntley Project K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	37	6	0.16 (16%)	0.02861	0.55939	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0983 Huntley Project K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	98	98	1 (100%)	0.96229	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	98	27	0.28 (28%)	0.14332	0.4636	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0983 Huntley Project K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0983 Huntley Project K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	89	15	0.17 (17%)	0.05405	0.41814	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	89	4	0.04 (4%)	0.00187	0.53378	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	89	3	0.03 (3%)	0.00078	0.59018	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0983 Huntley Project K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	13	1	0.08 (8%)	0.00139	0.82377	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0923 Hysham K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0923 Hysham K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0923 Hysham K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0923 Hysham K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0923 Hysham K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	11	0.85 (85%)	0.55231	0.96085	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0923 Hysham K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0923 Hysham K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0989 Independent Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0989 Independent Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0989 Independent Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	44	52	1 (100%)	0.93122	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	44	18	0.41 (41%)	0.21825	0.6319	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0989 Independent Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0989 Independent Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	36	21	0.58 (58%)	0.37614	0.76475	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	36	1	0.03 (3%)	0.00011	0.80475	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	36	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0989 Independent Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	10	4	0.4 (40%)	0.10256	0.79538	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0989 Independent Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0014 Jackson Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0014 Jackson Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0014 Jackson Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0014 Jackson Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0457 Jefferson H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0457 Jefferson H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	36	1	0.03 (3%)	0.00011	0.80475	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0457 Jefferson H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	20	22	1 (100%)	0.85138	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0457 Jefferson H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0457 Jefferson H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	36	28	0.78 (78%)	0.59603	0.89252	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	36	1	0.03 (3%)	0.00011	0.80475	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	36	7	0.19 (19%)	0.04339	0.56197	0.018 (1.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0457 Jefferson H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0060 Joliet Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0060 Joliet Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	26	20	0.77 (77%)	0.55126	0.90047	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0060 Joliet Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0060 Joliet Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	25	18	0.72 (72%)	0.48907	0.87356	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	25	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	25	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0060 Joliet Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0060 Joliet Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0061 Joliet H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0061 Joliet H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	15	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0061 Joliet H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0061 Joliet H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0377 Jordan Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0377 Jordan Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0377 Jordan Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	12	10	0.83 (83%)	0.5238	0.95789	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0377 Jordan Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0377 Jordan Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	10	6	0.6 (60%)	0.25239	0.86955	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	10	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	10	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0377 Jordan Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0377 Jordan Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0948 Judith Gap Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0948 Judith Gap Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0948 Judith Gap Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	14	0.78 (78%)	0.51601	0.91996	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0948 Judith Gap Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0948 Judith Gap Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	10	7	0.7 (70%)	0.34729	0.911	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	10	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	10	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0948 Judith Gap Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0948 Judith Gap Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0949 Judith Gap H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0949 Judith Gap H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0949 Judith Gap H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0949 Judith Gap H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0949 Judith Gap H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0949 Judith Gap H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0949 Judith Gap H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0310 Kalispell Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0310 Kalispell Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0310 Kalispell Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	366	356	0.97 (97%)	0.95005	0.98522	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	366	152	0.42 (42%)	0.33999	0.49478	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0310 Kalispell Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	274	18	0.07 (7%)	0.01309	0.27101	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	274	1	0 (0%)	-0.00007	0.79497	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0310 Kalispell Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	55	8	0.15 (15%)	0.02901	0.49186	0.548 (54.8%)	Not Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

District Name 0310 Kalispell Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0386 Kester Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0386 Kester Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0386 Kester Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0386 Kester Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0386 Kester Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0323 Kila Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	24	24	1 (100%)	0.86205	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0323 Kila Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0323 Kila Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	8	0.53 (53%)	0.23814	0.8069	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	2	0.13 (13%)	0.00814	0.74071	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0323 Kila Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0323 Kila Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0272 King Colony Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0272 King Colony Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

0272 King Colony Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0272 King Colony Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0272 King Colony Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0272 King Colony Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0187 Kinsey Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0187 Kinsey Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0187 Kinsey Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0187 Kinsey Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0187 Kinsey Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0187 Kinsey Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0173 Kircher Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0173 Kircher Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0173 Kircher Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

0173 Kircher Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0173 Kircher Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0173 Kircher Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0161 Knees Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0161 Knees Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0161 Knees Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0161 Knees Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0768 Lambert Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0768 Lambert Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0768 Lambert Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0768 Lambert Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0768 Lambert Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0768 Lambert Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0768 Lambert Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0769 Lambert H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0769 Lambert H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0769 Lambert H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0769 Lambert H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0769 Lambert H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0769 Lambert H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0769 Lambert H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0792 Lame Deer Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0792 Lame Deer Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0792 Lame Deer Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	124	125	1 (100%)	0.97019	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	124	15	0.12 (12%)	0.03193	0.36452	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0792 Lame Deer Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0792 Lame Deer Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1230 Lame Deer H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	12	5	0.42 (42%)	0.12585	0.77987	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1230 Lame Deer H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	27	6	0.22 (22%)	0.04913	0.6121	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1230 Lame Deer H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	18	18	1 (100%)	0.82416	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1230 Lame Deer H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1230 Lame Deer H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	28	22	0.79 (79%)	0.57944	0.90706	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	28	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	28	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1230 Lame Deer H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0367 LaMotte Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0367 LaMotte Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	14	1 (100%)	0.78473	1.00002	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0367 LaMotte Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0367 LaMotte Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0367 LaMotte Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0367 LaMotte Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0970 Laurel Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0970 Laurel Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0970 Laurel Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	242	234	0.97 (97%)	0.93546	0.98334	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	242	90	0.37 (37%)	0.27921	0.47507	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0970 Laurel Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0970 Laurel Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	167	79	0.47 (47%)	0.36677	0.58182	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	167	9	0.05 (5%)	0.00547	0.36913	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	167	2	0.01 (1%)	0	0.66573	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0970 Laurel Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	33	6	0.18 (18%)	0.03487	0.57709	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0970 Laurel Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0971 Laurel H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	25	21	0.84 (84%)	0.63398	0.94089	0.699 (69.9%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0971 Laurel H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	95	0	0 (0%)	0	0	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0971 Laurel H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	50	50	1 (100%)	0.92867	1.00001	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

Indicator 5C	Education Environment Rate -- Sep Schls	95	3	0.03 (3%)	0.00068	0.58842	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0971 Laurel H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0971 Laurel H S

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0411 Lavina K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0411 Lavina K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0411 Lavina K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	16	14	0.88 (88%)	0.62087	0.96769	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	16	10	0.62 (62%)	0.33291	0.84773	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0411 Lavina K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0411 Lavina K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	15	9	0.6 (60%)	0.30046	0.83972	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	15	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	15	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name

0411 Lavina K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0411 Lavina K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0568 Lennep Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0568 Lennep Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0568 Lennep Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0568 Lennep Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

District Name 0568 Lennep Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0568 Lennep Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0568 Lennep Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0258 Lewistown Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0258 Lewistown Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	Met
Indicator 3B	Assessment -- Participation Rates	220	228	1 (100%)	0.98344	1	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	220	93	0.42 (42%)	0.32735	0.52423	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	148	63	0.43 (43%)	0.31133	0.54856	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	148	26	0.18 (18%)	0.07463	0.36019	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	148	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0258 Lewistown Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	20	18	0.9 (90%)	0.68552	0.97381	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0258 Lewistown Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0522 Libby K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0522 Libby K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	58	1	0.02 (2%)	0	0.80051	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0522 Libby K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives			(%)			NA	Not Met
Indicator 3B	Assessment -- Participation Rates	154	152	0.99 (99%)	0.95356	0.99646	0.98 (98%)	Met
Indicator 3C	Assessment -- Proficiency Rates	154	46	0.3 (30%)	0.1862	0.44222	0.295 (29.5%)	Met

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0522 Libby K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0522 Libby K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	150	90	0.6 (60%)	0.4967	0.69511	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	150	9	0.06 (6%)	0.00666	0.37651	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	150	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0522 Libby K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	22	22	1 (100%)	0.85137	1.00001	0.548 (54.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0522 Libby K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1224 Liberty Elem

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1224 Liberty Elem

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1224 Liberty Elem

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	NA	NA	NA	NA	NA	NA	NA
Indicator 3B	Assessment -- Participation Rates	NA	NA	NA	NA	NA	NA	NA
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1224 Liberty Elem

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1224 Liberty Elem

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	*	*	*	*	*	*	*
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	*	*	*	*	*	*	*
Indicator 5C	Education Environment Rate -- Sep Schls	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1224 Liberty Elem

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 1224 Liberty Elem

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0009 Lima K-12 Schools

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0009 Lima K-12 Schools

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0009 Lima K-12 Schools

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	*	*	*	*	*	*	*
Indicator 3C	Assessment -- Proficiency Rates	*	*	*	*	*	*	*

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0009 Lima K-12 Schools

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0009 Lima K-12 Schools

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	13	10	0.77 (77%)	0.46031	0.92874	0.5 (50%)	Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	13	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	13	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0009 Lima K-12 Schools

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.

To determine the performance status for the district preschool education environment rate, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true preschool education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for preschool education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for preschool education environment rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained preschool education environment rates and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's preschool education environment rate is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's preschool education environment rate is lower than the state's indicator target. Therefore, the district has not met the state's indicator target for students with disabilities, ages 3-5, served in settings with typically developing peers.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0009 Lima K-12 Schools

INDICATOR #12 - Children Referred By Part C

Percent of children referred by Part C, prior to age 3, who are found eligible for Part B, and who have an IEP developed and implemented by their third birthday.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 12	Children referred by Part C	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

OPI Compliance Monitoring

Indicator Data Note:

NA = Data not available as district was not monitored in the year in which data is being reported.

District performance for this indicator is only for districts monitored in the year in which data is being reported. The OPI reviews a sample of student records as part of its compliance monitoring activities to determine if children referred by a Part C Service Provider Agency have an IEP in place at the age of three. A review of student records is to identify noncompliance issues with respect to 34 CFR 300.111 Child Find or 34 CFR 300.124 Transition of children from the Part C program to preschool programs.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0528 Lincoln County H S

INDICATOR #1 - Graduation Rates

Rate of youth with IEPs graduating from high school with a regular diploma compared to rate of all youth in the state graduating with a regular diploma.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 1	Graduation Rates	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education graduation rate calculation uses a cohort method to measure the proportion of students who, at some point in time, completed high school. The graduate rate (District Indicator Rate) is calculated by dividing the number of graduates, ages 14-21, in the school year of interest (District Indicator Count) by the sum of the total school leavers over the last four years (SPED Counts Total). School leavers include students graduating with a regular diploma, certificate recipients, dropouts, and students who reached the maximum age without receiving a diploma or certificate. The special education graduate count and special education leaver count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true graduation rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education graduation rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education graduation rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained graduation rate for students with disabilities and the state's target graduation rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for special education graduation rates.
2. If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's obtained graduation rate is higher than the state's target graduation rate. Therefore, the district has met (or exceeded) the state's indicator target set for special education graduation rates.
3. If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's obtained graduation rate is lower than the state's target graduation rate. Therefore, the district has not meet the state's indicator target set for special education graduation rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0528 Lincoln County H S

INDICATOR #2 - Dropout Rates

Rate of youth with IEPs dropping out of high school compared to rate of all youth in the state dropping out of high school.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 2	Dropout Rates	25	1	0.04 (4%)	0.00032	0.80959	0.058 (5.8%)	Met

Indicator Data Source:

OPI IDEA Part B Child Count Exiting reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The special education dropout rate calculation uses a status count in which the student's status at the end of the reporting year is used to determine whether the student is a dropout. This means students who were receiving special education and related services at the start of the reporting period (July 1), but were not so at the end of the reporting period (June 30) and did not exit special education through any other basis is considered a dropout. The dropout rate (District Indicator Rate) is calculated by dividing the number of special education dropouts (District Indicator Count) by the number of students in special education (SPED Counts Total). The special education dropout count and special education child count include all students with disabilities, ages 14-21, in public schools and state-operated programs.

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true dropout rate lies. This range of values becomes the standard by which we evaluate the district's performance in meeting the state's indicator target set for special education dropout rates for the specified school year.

Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education dropout rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained dropout rate for students with disabilities and the state's indicator target for special education dropout rates is not statistically significant. Therefore, we conclude that the school district has met the state's indicator target set for special education dropout rates.
2. If the state's indicator target for special education dropout rates is above the upper limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is lower than the state's indicator target. Therefore, the district has met the state's indicator target for special education dropout rates.
3. If the state's indicator target for special education dropout rates is below the lower limit of the confidence interval, we conclude that the district's obtained dropout rate for students with disabilities is higher than the state's indicator target. Therefore, the district has not met the state's indicator target for special education dropout rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0528 Lincoln County H S

INDICATOR #3 - Statewide Assessments

Participation and performance of children with disabilities on statewide assessments:

3A. Has District met the state's AYP objectives for progress for disability subgroup?

3B. Participation rate for children with IEPs in statewide assessments.

3C. Proficiency rate for children with IEPs against grade-level standards and alternate achievement standards.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 3A	Assessment -- Meeting AYP Objectives	*	*	*	*	*	*	*
Indicator 3B	Assessment -- Participation Rates	14	10	0.71 (71%)	0.40951	0.90015	0.98 (98%)	Not Met
Indicator 3C	Assessment -- Proficiency Rates	NA	NA	NA	NA	NA	NA	NA

Indicator Data Source:

Indicator 3A: <http://www.opi.mt.gov/ReportCard/index.html>

Indicator 3B-3C: OPI MontCAS Criterion-Reference Test Scores reported annually.

OPI Annual Data Collection Test Cycle Enrollment Count reported annually in March.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students (Indicators 3B and 3C) or fewer than 40 students for the disability subgroup (Indicator 3A).

Indicator 3A: The data for this indicator is from the NCLB Report Card. For additional information on AYP calculations, please use the following link: <http://www.opi.mt.gov/ReportCard/index.html>. For this indicator, a minimum N of 40 is used to be consistent with AYP calculations.

Indicator 3B – 3C: Due to separate data collections, the participation counts for some school districts exceed their enrollment count resulting in a participation rate of more than 100 percent. In these cases, the participation rate is reported as 100 percent.

Participation rates (District Indicator Rate) is calculated by dividing the number of special education students assessed (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities participating in the regular assessment (CRT), with and without accommodations, and in the alternate assessment (CRT-Alt).

Proficiency rates (District Indicator Rate) is calculated by dividing the number of special education students assessed scoring Proficient or Advanced (District Indicator Count) by the number of students in special education (SPED Counts Total). This count includes all students with disabilities who scored proficient or above in the regular assessment (CRT), with or without accommodations, and in the alternate assessment (CRT-Alt).

To determine the performance status for the district, a confidence interval is calculated to address the issue of variability or sampling error. The confidence interval provides a range of values within which we are 95 percent confident that the true participation and proficiency rates lie. These range of values become the standard by which we evaluate the district's performance in meeting the state's indicator targets set for special education participation and proficiency rates. Given a sample size of a minimum of 10, the state's indicator targets (either participation rates or proficiency rates) are compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for special education participation or proficiency rates for the specified school year. They are:

1. If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained participation rate for students with disabilities or proficiency rate for students with disabilities and the state's target participation rate or proficiency rate is not statistically different. Therefore, the district has met the state's indicator target set for special education participation rates or proficiency rates.
2. If the state's indicator target is below the lower limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is higher than the state's target participation rate or proficiency rate. Therefore, the district met (or exceeded) the state's indicator target set for special education participation rates or proficiency rates.
3. If the state's indicator target is above the upper limits of the confidence interval, we conclude that the district's obtained participation or proficiency rate is lower than the state's target participation rate or proficiency rate. Therefore, the district has not met the state's indicator target set for special education participation rates or proficiency rates.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0528 Lincoln County H S

INDICATOR #4 - Suspension and Expulsion Rates

Districts who have been identified as having a significant discrepancy in long-term suspension and expulsion rates.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 4A	Suspension and Expulsion Rates	NA	NA	NA	NA	NA	NA	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

OPI School Discipline Data Collection reported annually on June 30.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The assessment of a school district's performance based on long-term suspension and expulsion rates is done by comparing the suspension and expulsion rates for students with disabilities to the long-term suspension and expulsion rates for nondisabled students. Long-term suspension or expulsion is defined as a suspension or expulsion that results in removal of a student, out-of-school, for greater than 10 school days or a student with multiple short-term (10 school days or less) out-of-school suspensions or expulsions that sum to greater than 10 school days during the school year.

For each racial/ethnic group, a statistical test of the difference between proportions is conducted to determine if the size of difference between the school district's special education long-term suspension and expulsion rates and the long-term suspension and expulsion rates for regular education students in the school district is statistically significant. In our comparison of long-term suspension and expulsion rates, we have set a .05 level of significance. This means, we are 95 percent confident that the differences between the rates are real (significant) and not due to random factors. However, the precision and reliability of this method is dependent upon having a large enough sample size to be representative of the school district's population and so, we also employ a minimum sample size (minimum N) of 10.

If the difference between the long-term suspension and expulsion rates for students with disabilities and the rates for nondisabled students by race/ethnicity group is statistically significant for a specific school district, the school district is flagged for additional investigation to determine if a significant discrepancy is occurring in the rates of long-term suspensions and expulsions of students with disabilities in a school year. This includes validation of the school district's long-term suspension and expulsion data and a systematic review of complaints/mediation/due process information, compliance monitoring and program data.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0528 Lincoln County H S

INDICATOR #5 - Education Environment Rates

Percent of children with IEPs, aged 6-21,

5A. Removed from the regular class less than 21% of the school day.

5B. Removed from regular class greater than 60% of the day; or

5C. Served in public or private separate schools, residential placements, or homebound or hospital placements.

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 5A	Education Environment Rate -- Reg Class > 80% of day	25	0	0 (0%)	0	0	0.5 (50%)	Not Met
Indicator 5B	Education Environment Rate -- Reg Class < 40% of day	25	0	0 (0%)	0	0	0.12 (12%)	Met
Indicator 5C	Education Environment Rate -- Sep Schls	25	0	0 (0%)	0	0	0.018 (1.8%)	Met

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 6-21, in a particular educational environment (District Indicator Count) by the number of students with disabilities, ages 6-21, in the state (SPED Counts Total).

The confidence interval is a statistical method that provides a range of values within which we are 95 percent confident that the true education environment rate lies. This range of values becomes the standard by which we evaluate if the district has met the state's performance target for education environment rates for a specified school year. Given a sample size of a minimum of 10, the state's indicator target is compared to the range of values of the confidence interval. There are three ways in which a school district is determined to have met or not met the state's indicator target set for education environment rates for students with disabilities for the specified school year. They are:

For Indicator 5A: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has met (or exceeded) the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5B: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's target rate is not statistically different. Therefore, we conclude that the school district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

For Indicator 5C: 1) If the state's indicator target falls within the upper and lower limits of the confidence interval, we are 95 percent confident that the difference between the district's obtained education environment rate for this category and the state's indicator target is not statistically different. Therefore, the district has met the state's indicator target set for education environment rates for this category. 2) If the state's indicator target is above the upper limit of the confidence interval, we conclude that the district's education environment rate for this category is lower than the state's indicator target. Therefore, the district met the state's indicator target set for education environment rates for this category. 3) If the state's indicator target is below the lower limit of the confidence interval, we conclude that the district's education environment rate for this category is higher than the state's indicator target. Therefore, the district has not met the state's indicator target set for education environment rates for this category.

DISTRICT PERFORMANCE REPORT ON STATE PERFORMANCE INDICATORS

For School Year: 2005-2006

District Name 0528 Lincoln County H S

INDICATOR #6 - Preschool Education Environment

Percent of preschool children with IEPs who receive special education and related services in settings with typically developing peers (e.g., early childhood settings, home and part-time early childhood/part-time early childhood special education settings).

Indicator Number	Indicator Name	SPED Counts Total	District Indicator Count	District Indicator Rate	Confidence Interval Lower Limit	Confidence Interval Upper Limit	State Indicator Target	Perform Status
Indicator 6	Preschool Education Environment Rate	*	*	*	*	*	*	*

Indicator Data Source:

OPI IDEA-Part B Child Count reported annually on December 1.

Indicator Data Note:

NA = Not applicable for this school district or count of students in this group is 0.

* = Statistics not reported for counts of fewer than 10 students.

The preschool educational environment rate (District Indicator Rate) is calculated by dividing the number of students, ages 3-5, in settings with typically developing peers (District Indicator Count) by the number of students with disabilities, ages 3-5, in the state (SPED Counts Total). Of the seven settings identified for services, only the settings with typically developing peers are included in this performance indicator. They are: early childhood settings, home, and part-time early childhood/part-time early childhood special education settings.
